Giro para-hipocampal

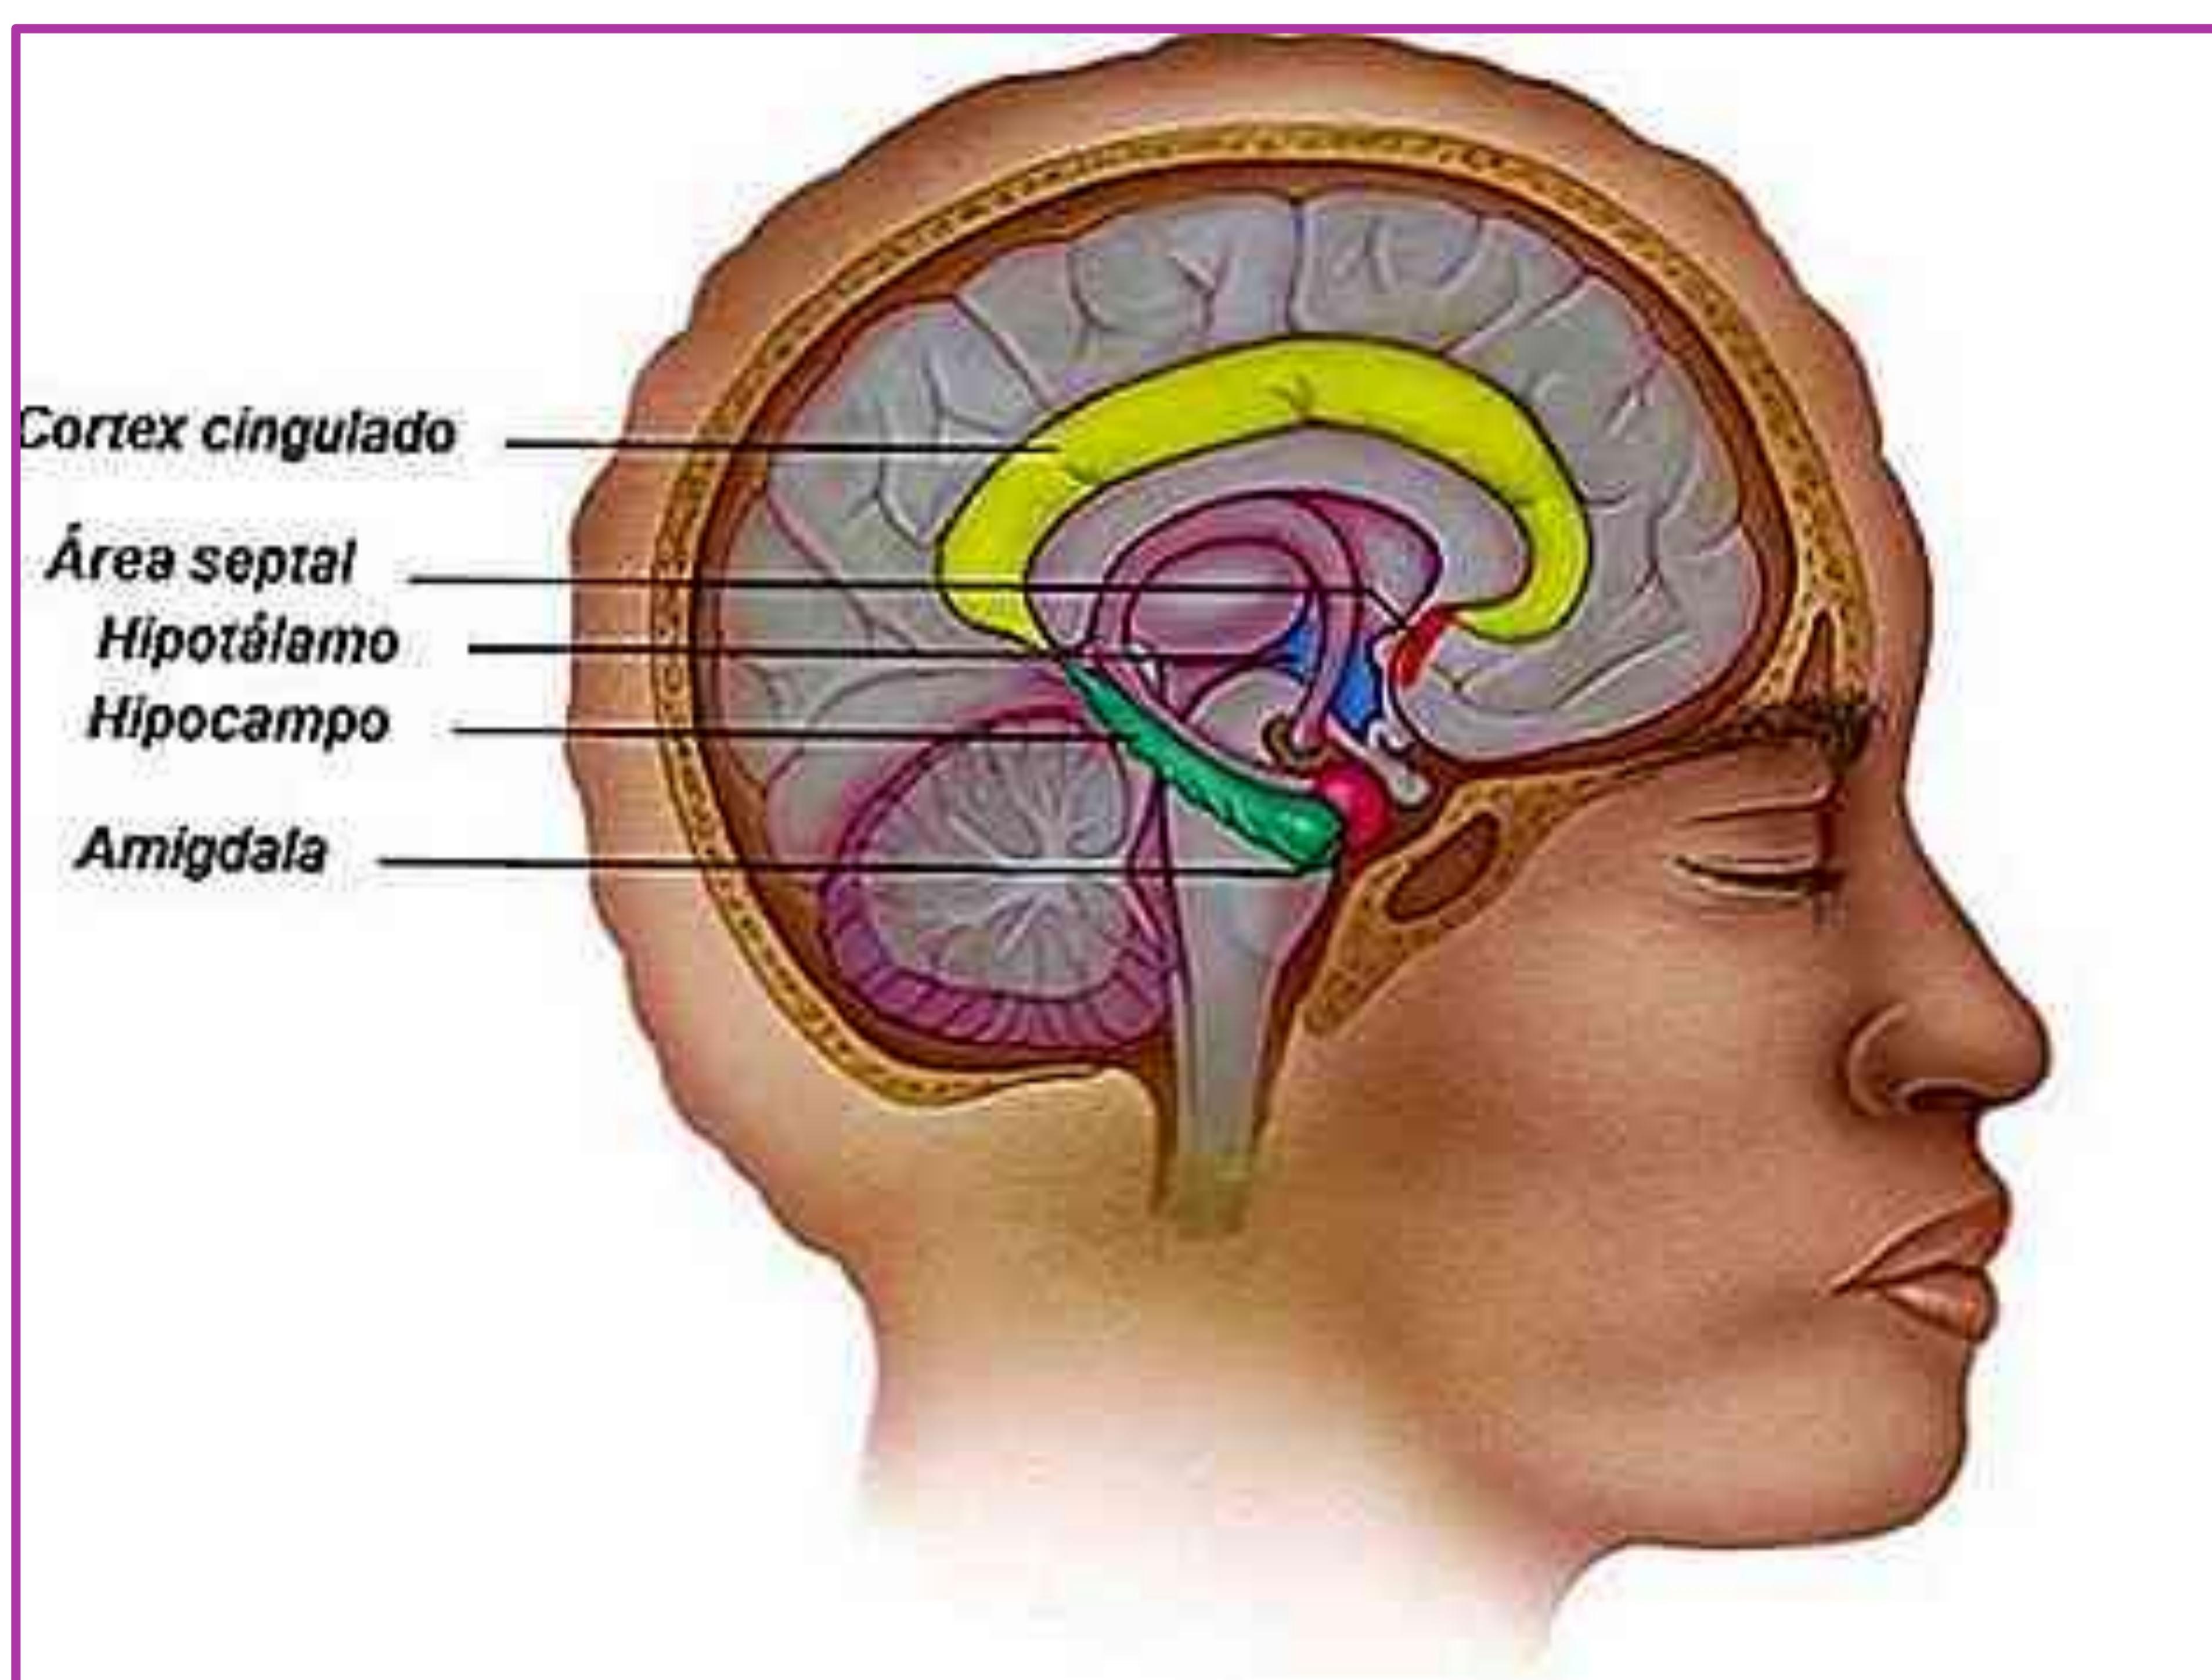

Papel importante na codificação e na recuperação da memória

Área septal

É um dos centros de prazer do cérebro

Núcleos anteriores do tálamo → Fazem parte do circuito de Papez, que é relacionado com o comportamento afetivo, emocional e com memória recente

Núcleos habenulares → Participam da regulação dos níveis de dopamina nos neurônios do sistema mesolímbico → Os quais constituem a principal área de recompensa (ou de prazer) do cérebro
